${ }^{1}$ Figures from GitHub (Larson, 2019)

## GNSS-IR

Y. Georgiadou and A. Kleusberg (1988)
multipath frequency

$$
f_{\Psi}=\frac{2 \cdot \mathrm{RH}}{\lambda} \cos (\alpha) \cdot \frac{\mathrm{d} \alpha}{\mathrm{~d} t}
$$

Penina Axelrad (2005)
the frequency extracted from SNR data is representative of the reflector height

$$
\begin{aligned}
\alpha & =>\sin (\alpha) \\
f_{\Psi} & =2 \mathrm{RH} / \lambda
\end{aligned}
$$
