CHALMERS

EPOS Sweden (established in 2022) is a national research infrastructure that operates the Swedish contribution to EPOS-ERIC. It is hosted by Uppsala University and supported by a consortium of nine partners. The Swedish membership in EPOS-ERIC is managed by the Swedish Research Council.

EPOS-ERIC and its associated Thematic Core Services (together "EPOS-EU") is the single, genuinely pan-European, distributed research infrastructure for data and facilities related to studies of the entire Solid Earth.

EPOS provides data and data services from various disciplines and a multitude of national providers in a homogenised fashion according to standards defined by the thematic communities and FAIR data principles.

Challenges:

- 1) Involve the Swedish Earth Sciences community as users of EPOS data and services, including students and the private sector.
- 2) Increase the number of thematic areas (Thematic Core Services) with participation of Swedish researchers.
- 3) Increase the total volume of research data that Sweden supplies to and through EPOS.
